

12	H11: Accessible Design	1. Simple Task	2	No option to call/record voice memos for users who are not very text savvy.	Small business owners might find it inefficient to only be able to text, calls/voice memos might get the point across quicker most of the time. Sharing images etc would also be a helpful feature.	Add option to upload voice memos/texts etc.		B
13	H8: Aesthetic & Minimalist Design	3. Complex Task	1	Make my events & other events a bit more eye-catching/prominent to improve the visual heirarchy.	We want the distinction to be super clear.	Maybe have them in green bold OR Create a toggle on the top of the screen for my events other events and it will show depending on which is selected		B
14	H5: Error Prevention	3. Complex Task	1	The "Finished Event" isn't quite clear on what clicking the button would do.	"Finished Event" might be confusing to users - they might not be sure on what that means.	Use more self explanatory terms like "Rate your event" etc.		B
15	H5: Error Prevention	3. Complex Task	1	The "Finished Event" isn't quite clear on what clicking the button would do.	"Finished Event" might be confusing to users - they might not be sure on what that means.	Use more self explanatory terms like "Rate your event" etc.		B, D
16	H6: Recognition not Recall	3. Complex Task	2	Not entirely clear where the "Personal Notes (for yourself)" are being stored when rating the Finished Event.	Users might want to be able to look at these in the future but are unable to do so.	Maybe add like an instruction in the green box for where the user can later access these. It's clear that you can see past events in past history in the profile section but not clear enough whether it also has the notes etc from events//so maybe rephrase it in a way to make it more clear.		B, D
17	H9: Help Users with Errors	3. Complex Task	1	The green info panel is at the bottom and intuitively users are likely to read it at the end after they have already filled in their details.	Users should first read the information panel/instructions/guidance before they start filling their details.	The green panel should be at the top to make it more intuitive.		B, D
18	H12: Value Alignment & Inclusion	4. All Tasks	2	The App does not have an introductory/onboarding page - maybe something about its values/mission etc.	Something like this would help users understand the app's mission and values.	Add an about page that would give a brief intro of the app and its features, its values and commitment.		B, D
19	H12: Value Alignment & Inclusion	5. Extra Violations	1	The App currently lacks other language options.	It might not be as user-friemly for non English speakers.	Introduce other language options.		B, D
20	H3: User Control & Freedom	3. Complex Task	2	When the user clicks "finished task" they don't have an option to exit the pop up if the user accidentally clicks on it	This violates the user control, since the user isn't able to undo or exit a task	Add a x button to signal "close" pop up		B, D
21	H7: Flexibility & Efficiency of Use	3. Complex Task	2	The user has to go through with rating the event first before they can go to repeat it.	Users might want to just directly repeat event instead of rating it first, (if they are like busy small business onwers and don't want to go through with closing the event but just want to reschedule it) so the option to do so should be there.	Just have repeat event, and move the rating button to somewhere else?		B, D
22	H4: Consistency & Standards	1. Simple Task	3	When the user decides to toggle between AI and not AI, the heading and the subheading are changing. e.g. "The Daily Grind Coffee Co" is the heading for the the AI version and a subheading for non-AI (individual feedback)	The heading of "The Daily Coffee Grind Co." should be the heading for the non AI toggle, but in this case it becomes the subheading when you toggle AI off	Keep "The Daily Grind Coffee Co." as the heading for both AI and non AI as it is the more important read as opposed to the person who post a collaboration invite. Because users are looking for small business rather than people who run small businesses (small read, but hopefully its helpful)		B, D
23	H4: Consistency & Standards	1. Simple Task	2	When the user toggles between AI and non-AI, the icon with the initial is changing in size and shape	The change of size and shape violates H4 as it becomes inconsistent for the same functionality and may require users to relearn this pattern	Decide on one shape and size because it serves the same purpose. I recommend sticking with the smaller shape of the circle.		A
24	H8: Aesthetic & Minimalist Design	2. Moderate Task	1	When the user checks the community page and finds the "my events" and anything before it reads "other events". For "my events" inside the event box its labeled as "Your event", which is redundant	It shouldn't include any extra/unnecessary repetitive information. which it does here since the user knows its under my event, and has an extra "my event" tag.	Decide between just one indicator. I personally recommend creating a toggle to toggle between your own event and other event		A
25	H4: Consistency & Standards	2. Moderate Task	1	When the user finishes creating a stich and when they view the event. The icon spacing between message and the icon message is not consistent with the spacing of the edit details and edit details icon	The icon spacing for editing is a lot closer than the send message icon to the message text, thus its inconsistent and just a visual minor critiqie	Have a universal spacing between the icon and text		A, D
26	H4: Consistency & Standards	3. Complex Task	1	When the user checks the community page to finish an event. The user has a choice to repeat an event and a minor issue is that when it says "Event" it has a repeat icon infront of the Event, but users know they are repeating the event or not. For consistency sake, keep Event as "Event" as its functionality is to tell the user what event they are looking to repeat or not.	The repeat icon before event is inconsistent labeling and since Event appears without an icon everywhere else, it breaks the prototypes pattern. And the Icon isn't adding anything new	Remove the repeat Icon		A, D

27	H4: Consistency & Standards	3. Complex Task	1	When the user goes through the post "survey" for finishing an event, the tip box does not include the tip text after the light bulb icon	We see the tip text come after the light bulb icon from every other tip box, but not this one. Thus, lacks consistency and there is no standard common ground	add the "tip" text following the light bulb icon	A, D
28	H2: Match b/w System & World	5. Extra Violations	0	Should the text say "finish event" instead of "finished event" if thats the button the user clicks to end the event?			A, D
29	H3: User Control & Freedom	1. Simple Task	3	Once the AI-generated message is sent, there is no way to undo or edit the message.	This restricts user control and increases frustration since the message auto-sends without confirmation or edit access.	Add a "Confirm Send" step or/and a 2-3 second Undo option similar to Gmail's undo feature.	C
30	H7: Flexibility & Efficiency of Use	1. Simple Task	2	Experienced users who repeatedly send outreach messages must always scroll through the AI Template block and click Send Template Message; there's no keyboard shortcut or quick-send gesture.	This slows down frequent networkers who want faster interaction once they trust the template.	Offer a swipe gesture or long-press quick-send for advanced users after the first few uses,	C
31	H4: Consistency & Standards	2. Moderate Task	1	The calendar picker interaction differs visually from the rest of the interface (different border radius and spacing)	This inconsistency is a little jarring.	Match calendar styling to the app's design system	C
34	H7: Flexibility & Efficiency of Use	2. Moderate Task	1	The Stitch creation flow doesn't include an option to make the event recurring (I understand that after that you can make it recurring, might be beneficial to have it here as well).	Collaborators who really like each other might just schedule recurring sessions from the first time	Add a "Repeat event" toggle during Stitch creation, consistent with the later recurring event feature in the Community page.	C
35	H6: Recognition not Recall	2. Moderate Task	2	After users view the confirmation ("Check it	Users must recall the event name c	Use a subtle animation or color highlight around	C
36	H11: Accessible Design	2. Moderate Task	1	The system doesn't provide any autocomple	Returning users repeating similar c	Add a dropdown of recent or recurring event nar	C
37	H3: User Control & Freedom	2. Moderate Task	2	Users have no ability to delete or archive pa	Over time, completed collaboration	Add a "Delete" or "Archive" option under "Finishe	C
