Problem/Solution

n

Problem

New small businesses are trying to establish themselves.

Old small businesses are trying to keep up with the changing times.

For all small businesses, finding support, adapting to a new generation, and creating community has been difficult.

Solution

Stitch uses an AI matching algorithm to allow small businesses to collaborate on events to attract new customers

H4: Consistency & Standards

4

H8: Aesthetic & Minimalist Design

4

H3: User Control & Freedom

Values and Usability Goals

Values

Transparency

- User should understand the underlying details behind AI matches

Accessibility

- Every user regardless of technical background, can can easily navigate and benefit from all platform features

Empowerment

- Strengthen community by enabling members to support and uplift each other

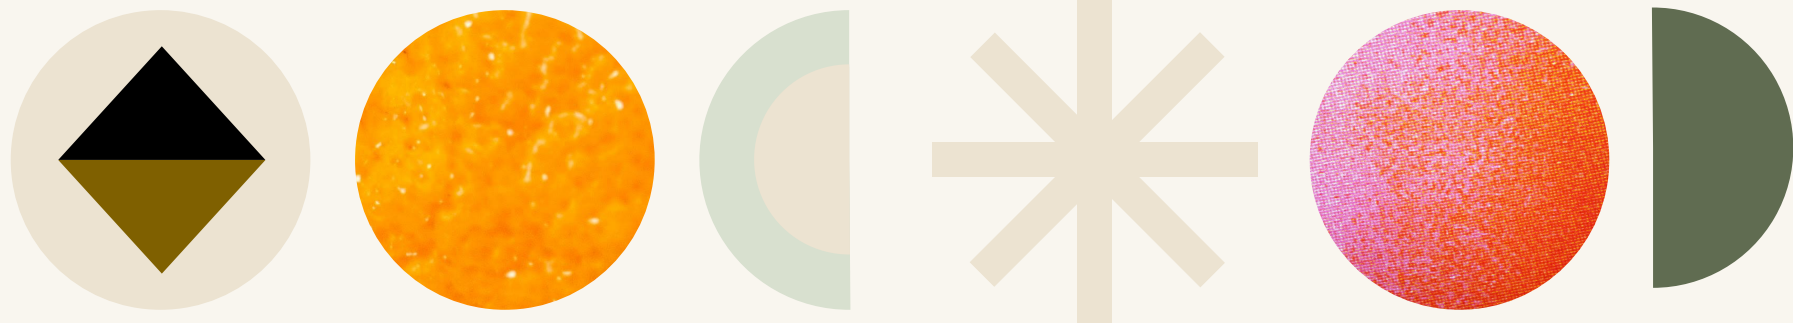

Usability goals

Efficient

- How many clicks total did the user take to accomplish the intended task?

Flexible

- Can users devise multiple ways to complete a task?

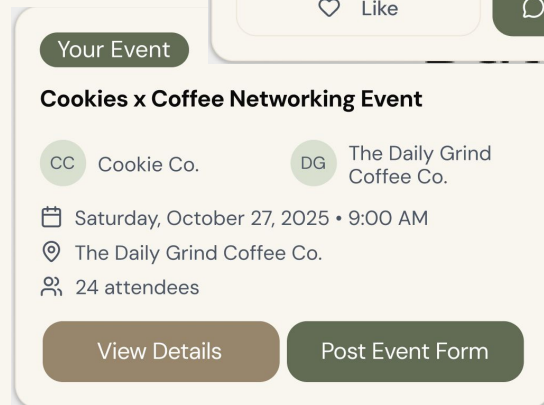

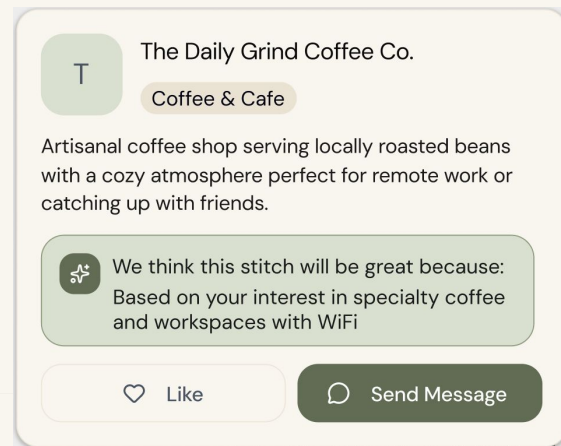

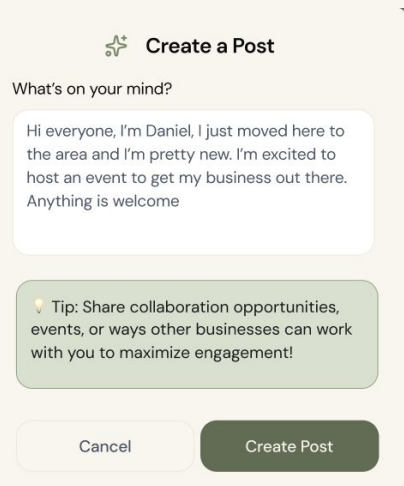

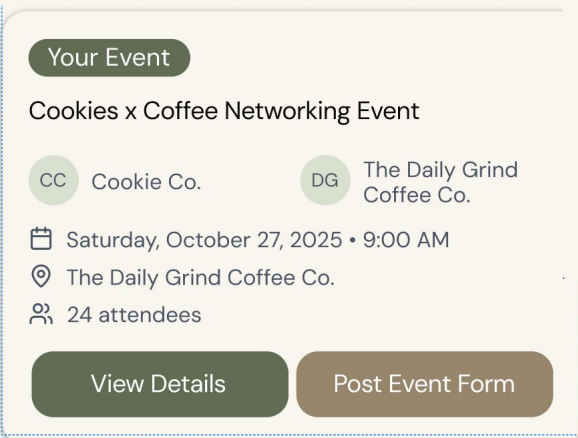

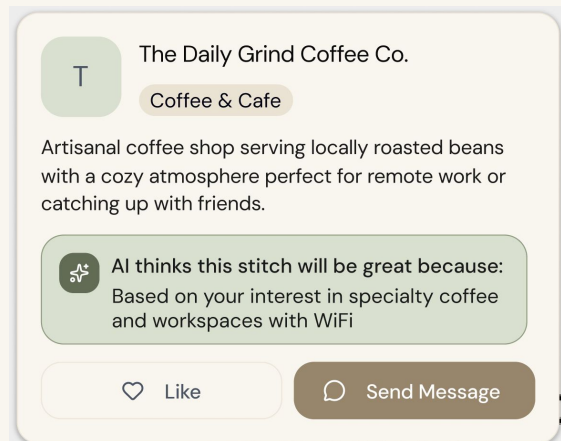

Major Revisions

All Screens

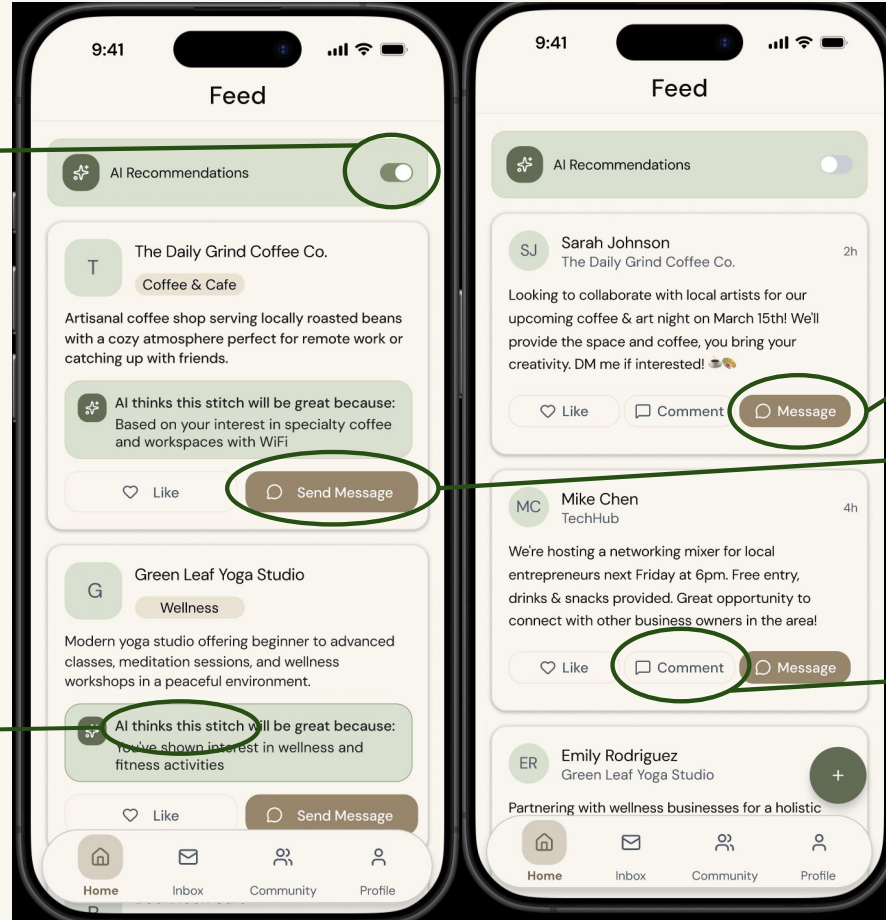

Sev 4: H4: The navigation elements are all different colours

Dark green draws attention more than beige, use that for call to action consistently

Feed Screens

Before:

Sev 3: H1: The AI toggle lacks confirmation, how will the user know if its off/on.

Sev 1: H2: Uses non-user friendly language - "AI recommends.."

Sev 3: H4: The sending a message button the feed changes between AI toggled on/off - "Message" vs "Send Message"

Sev 3: H4: The option to comment goes away in AI toggled-on mode, but it's there when AI mode is toggled off?

Feed Screens

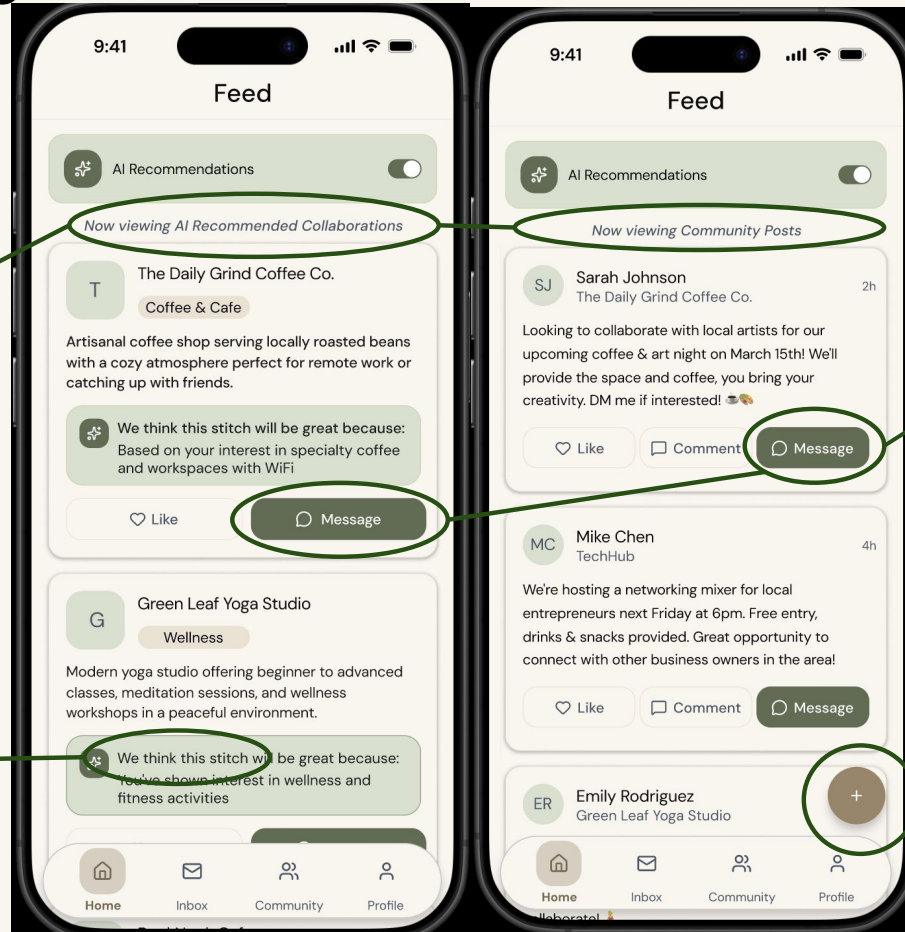

After

Explicit texts explaining differences between AI recommendations and community posts: user will understand AI toggle (H1) and understand comment options (H4)

Accessibility ++

Instead of AI recommends... changed to "We think..." for more user friendly language (H2)

Accessibility ++

Changed to "message" for consistency (H4)

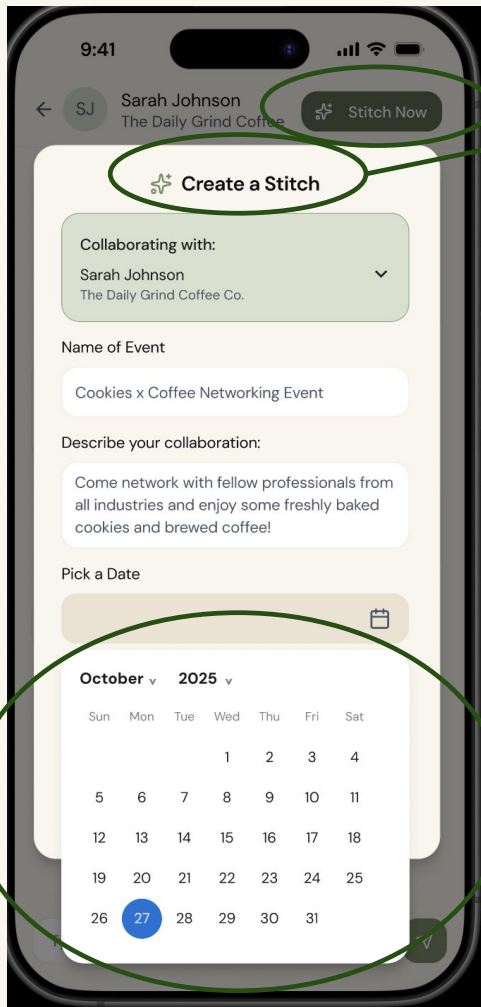

Button color change (H4)

Post button change to brown to distinguish

Create a Stitch

Sev 1: H4: The calendar picker interaction differs visually from the rest of the interface (different border radius and spacing)

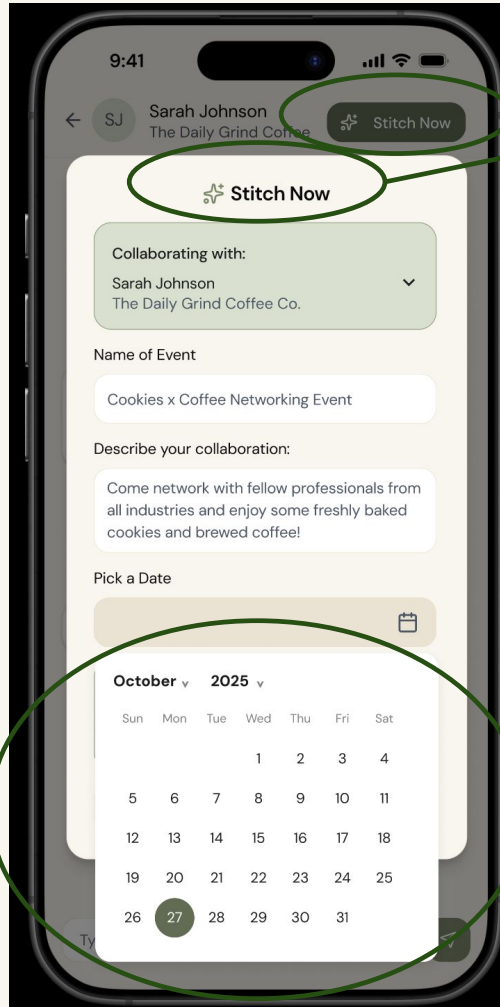

Before

Sev 3: H4:
Inconsistency in "Stitch now" vs "Create Stitch"

Create a Stitch

After

Everything is corrected to "Stitch Now" for consistency

Accessibility ++

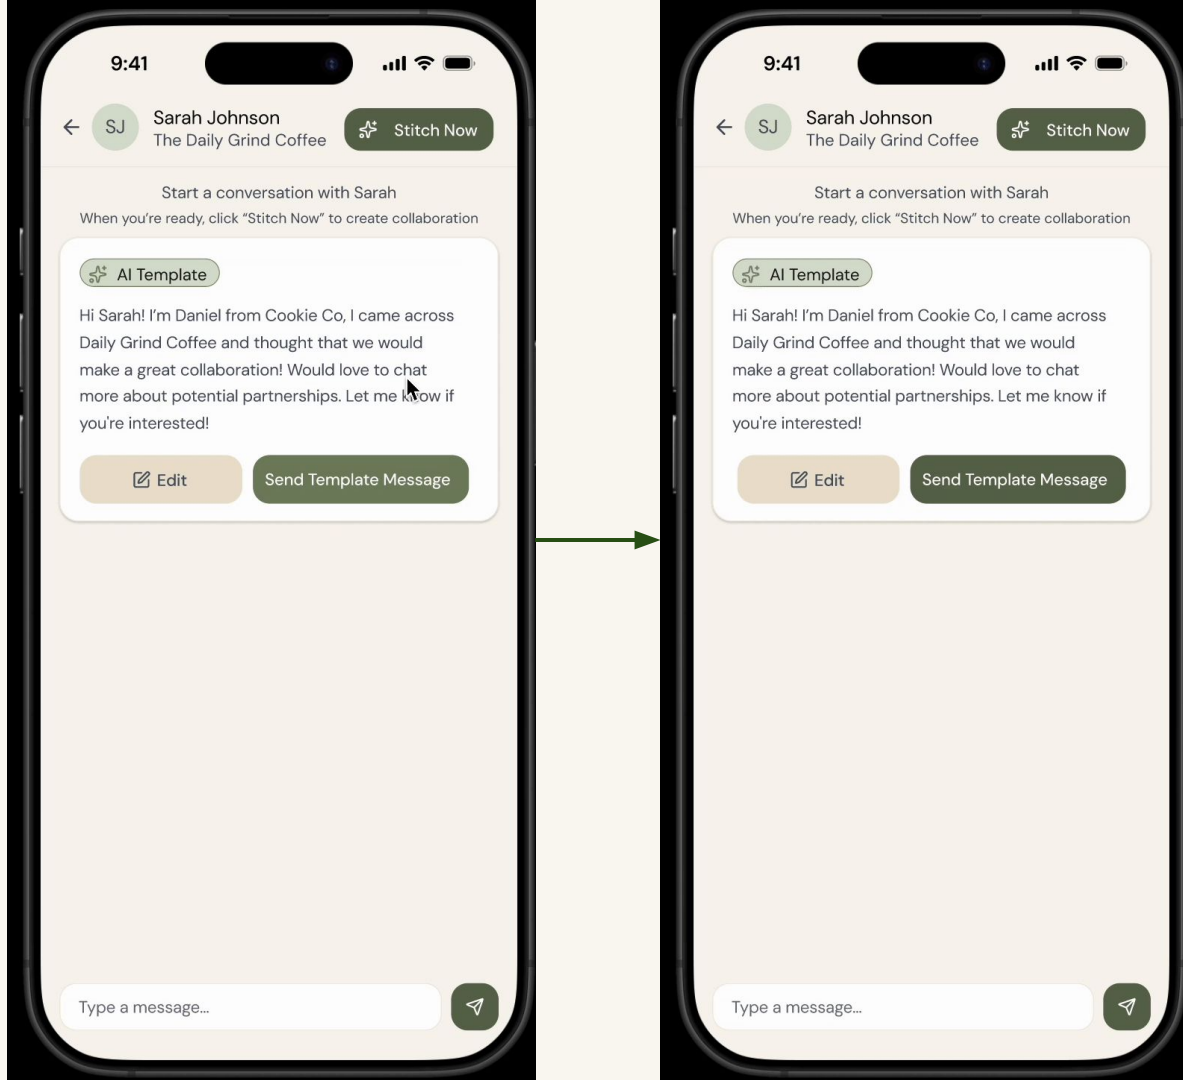

Calendar is changed to reflect border radius and dark green color

Messages

Sev 3: H3 Once the AI-generated message is sent, there is no way to undo or edit the message.

While we decided to not have a way to edit/undo the message, we are giving users more control by adding a guardrail to make sure they really want to send the AI template message first.

Flexibility ++

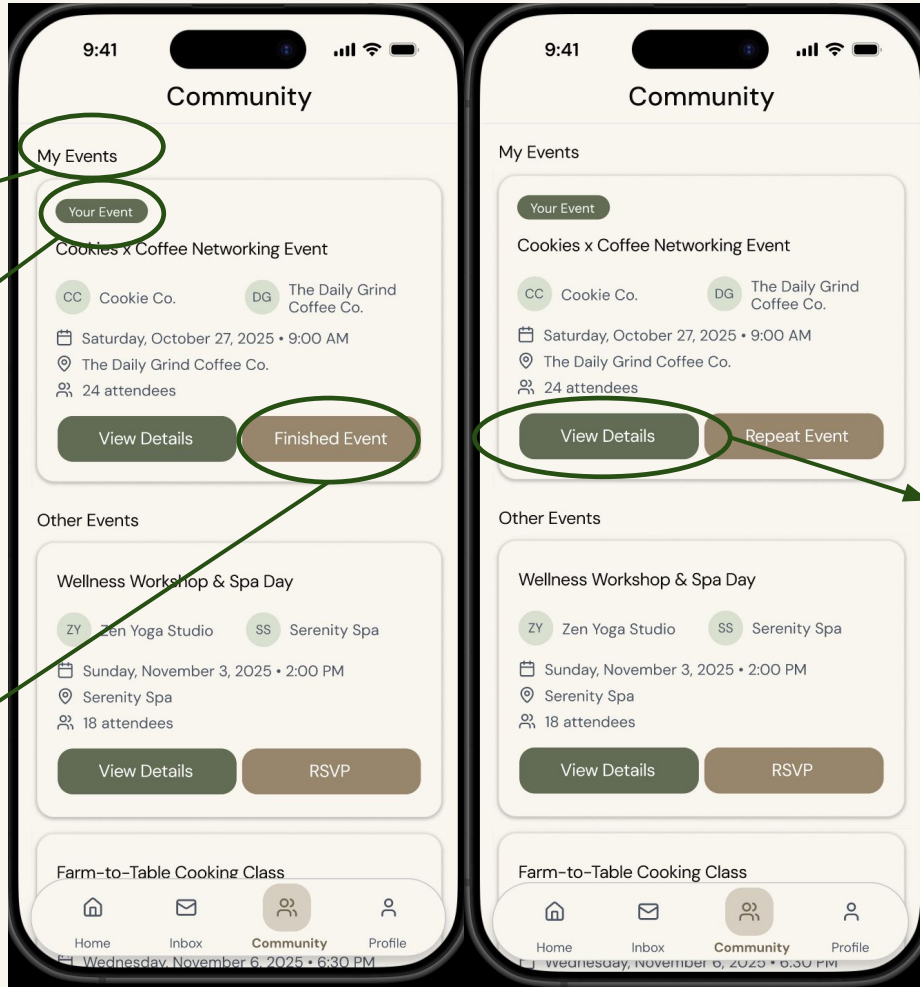

Communities

Before

Sev 1: H8: Make my events & other events a bit more eye-catching/prominent to improve the visual hierarchy.

Sev 1: H8: For "my events" inside the event box its labeled as 'Your event'. which is redundant

Sev 1: H5: The "Finished Event" isn't quite clear on what clicking the button would do.

Sev 2: H3: Users have no ability to delete or archive past events once finished.

Sev 0: H2: Should the text say "finish event" instead of "finished event" if that's the button the user clicks to end the event?

Communities

Titles for My Events and Other Events are bolded and larger for emphasis

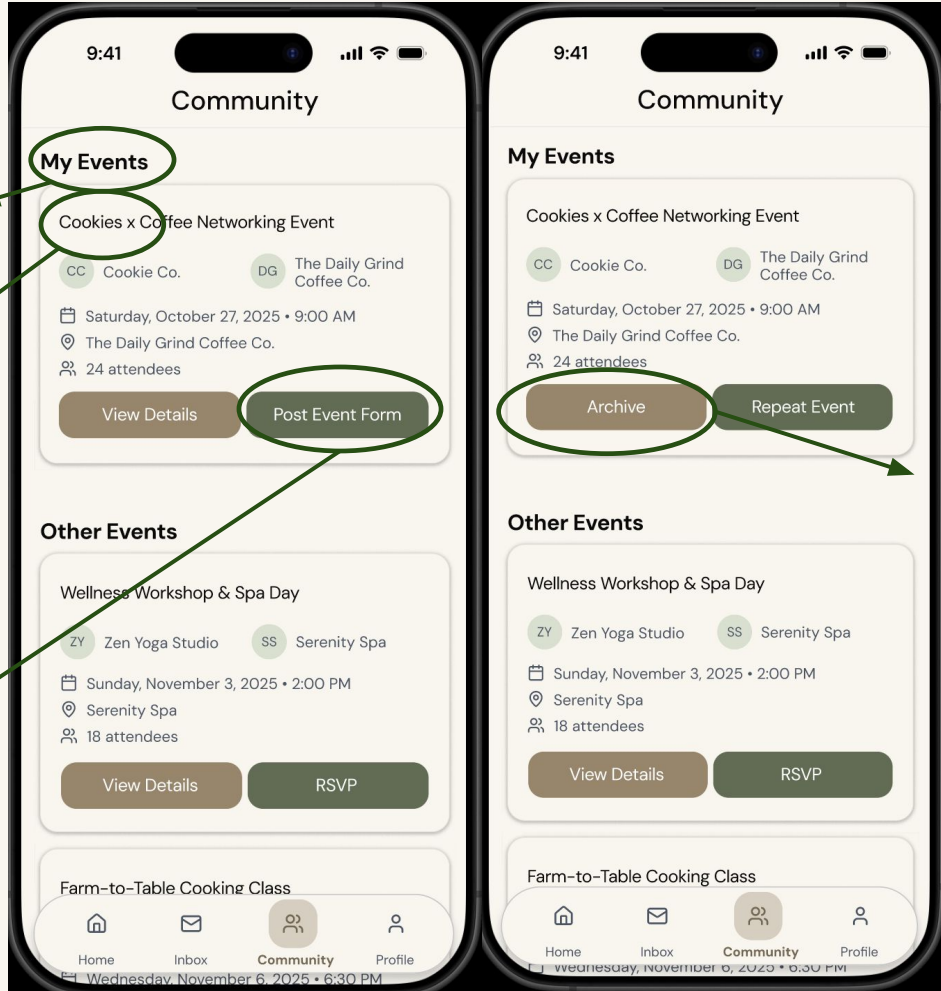

Accessibility ++

Removed redundant "your events" label

Accessibility ++

Changed from ambiguous "Finished Event" to "Post Event Form" to make it clearly exactly what this button does

After

Option to archive event only after filling out post event form

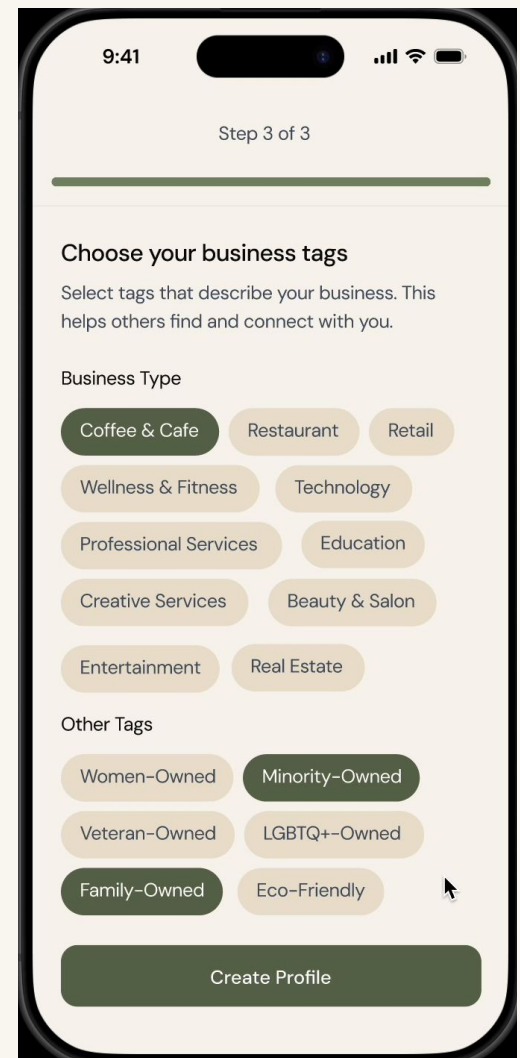

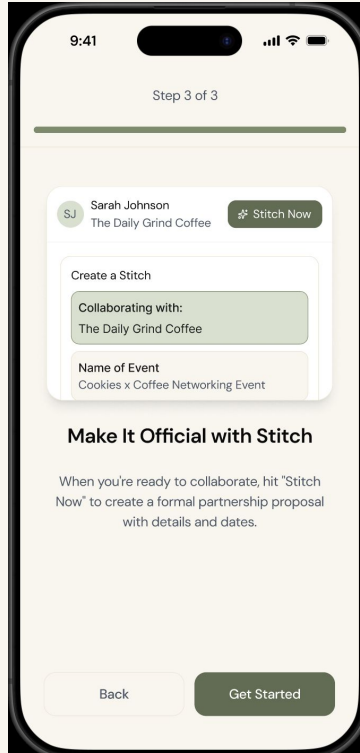

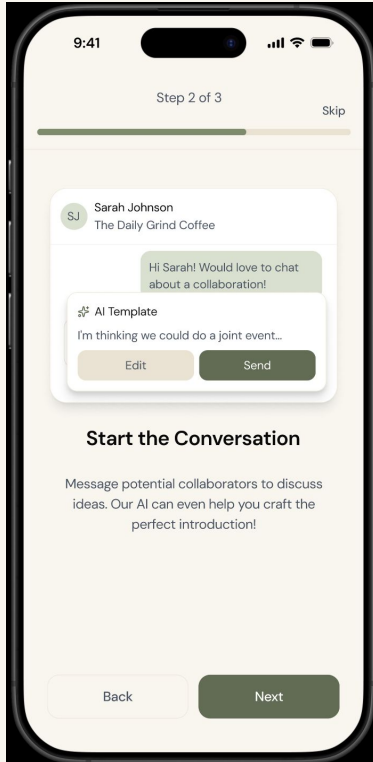

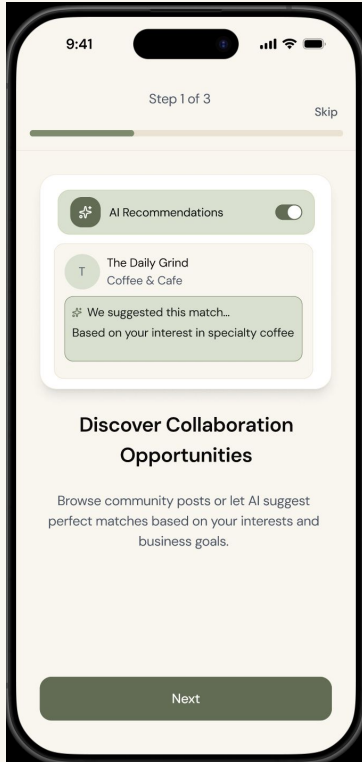

Flexibility ++

Efficiency ++

Onboarding Flow

Transparency ++

Sev 2: H12: The App does not have an introductory/onboarding page - maybe something about its values/mission etc.

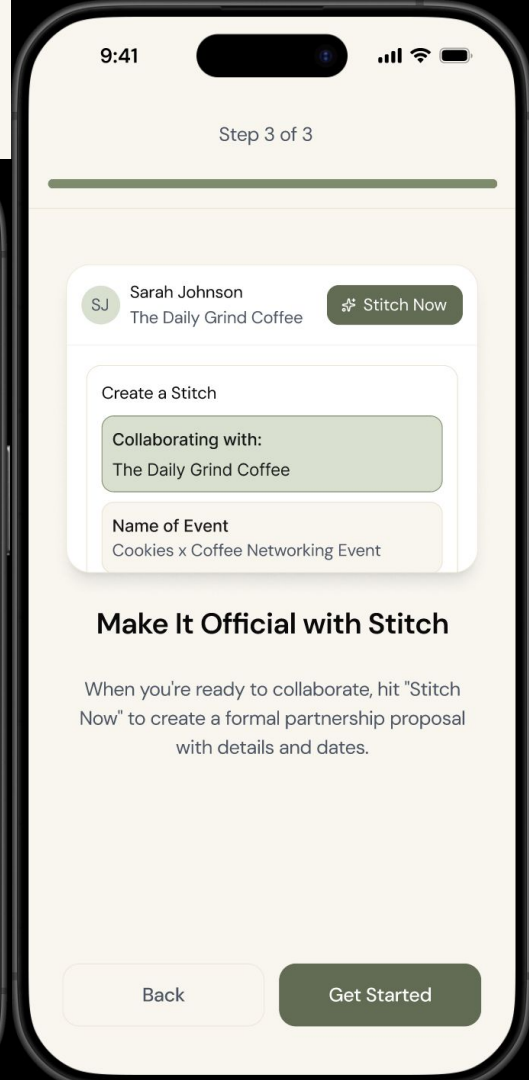

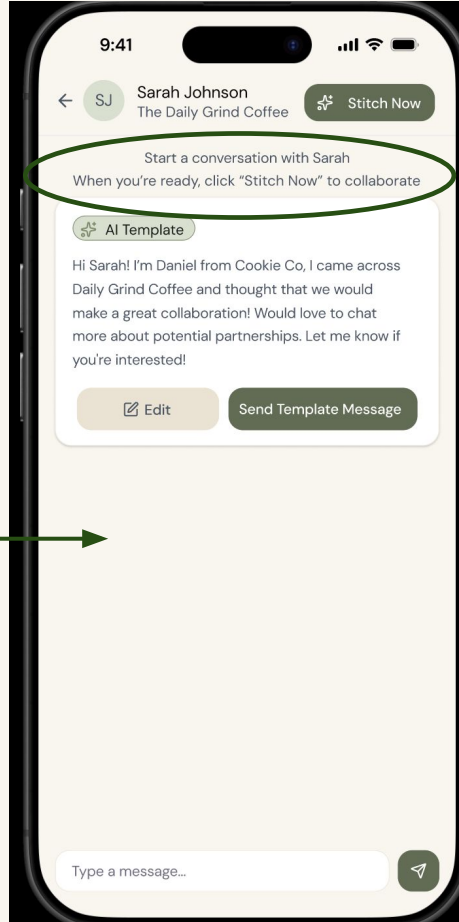

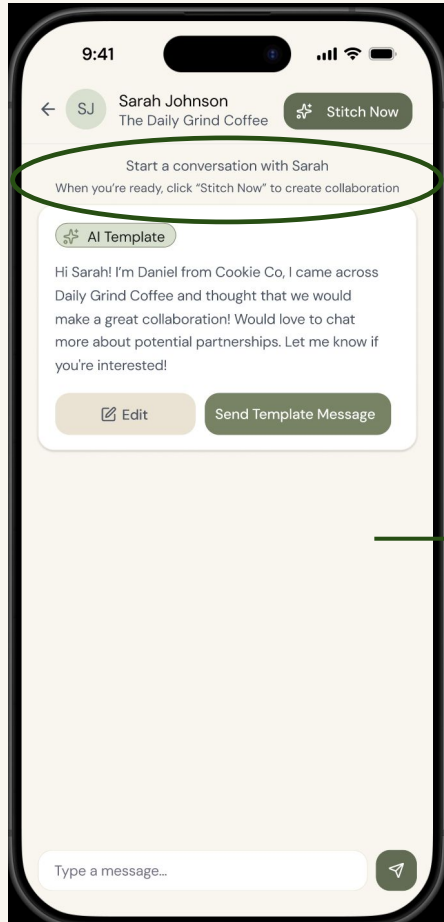

Messages & Onboarding

Sev 3: H10: Not clearly documented what the "Stitch Now" button does/when user should click it

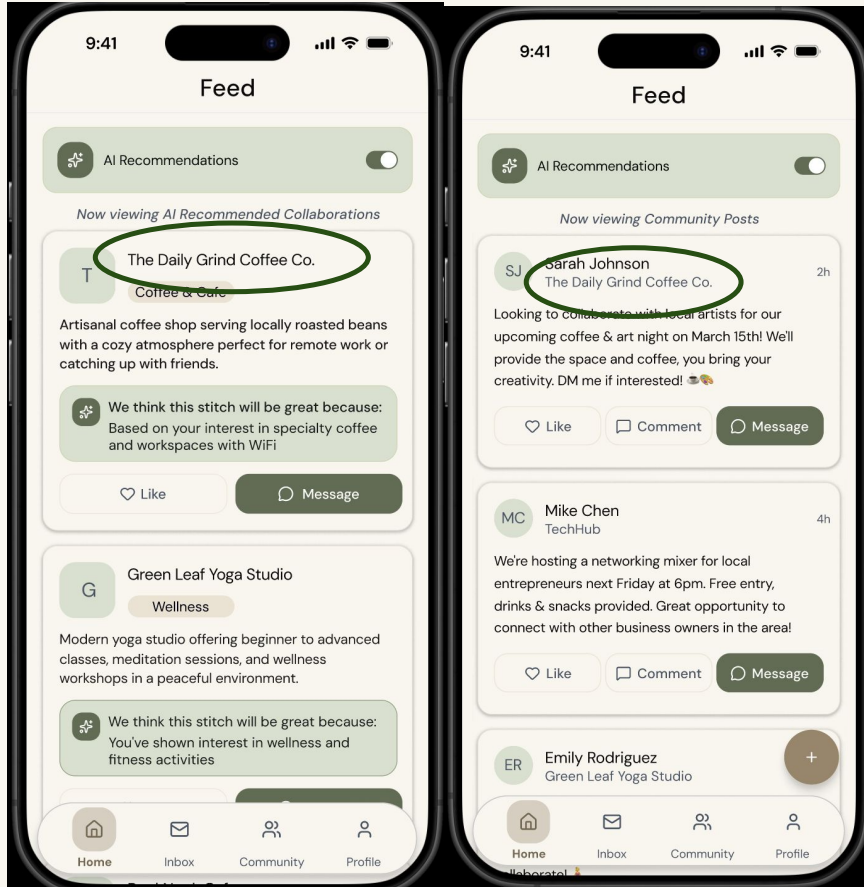

Transparency ++

Changes:

1. Increased font size of "when you're ready... click Stitch Now" hint
2. Created onboarding page to make documentation clear

Addressing Sev 3 No Change

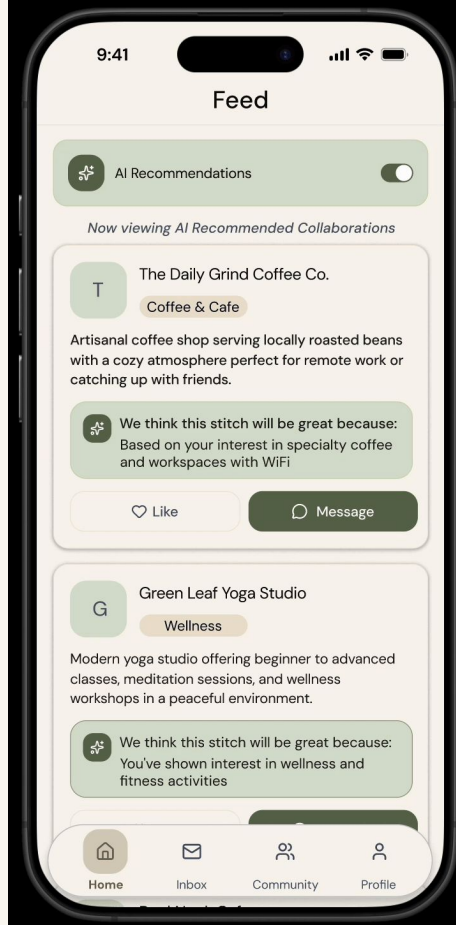

Sev 3: H4: When the user decides to toggle between AI and not AI, the heading and the subheading are changing. e.g. "The Daily Grind Coffee Co" is the heading for the the AI version and a subheading for non-AI (individual feedback)

Intentional:

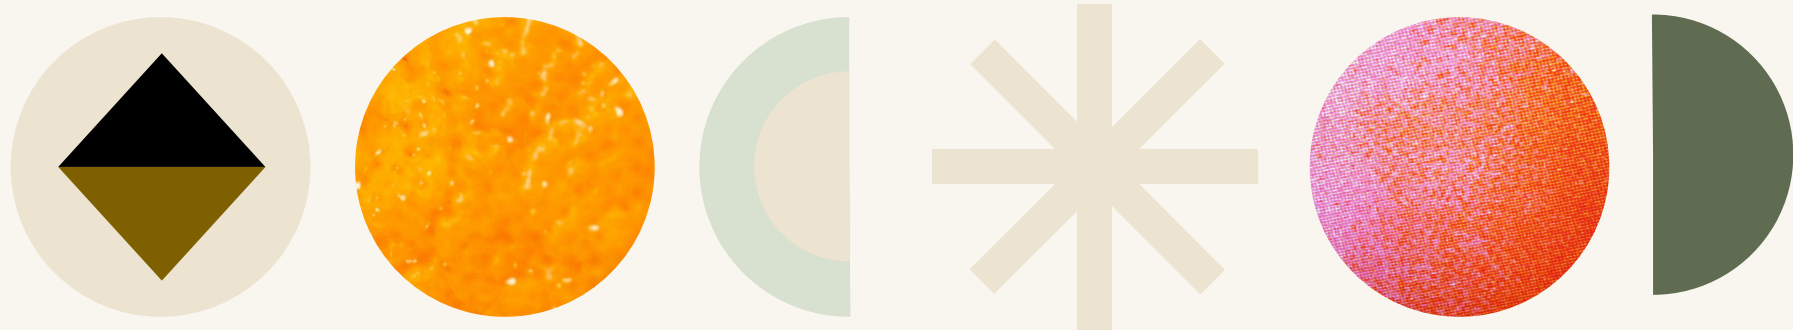

Since community posts is centered on the owners who are posting, it would make more sense to highlight their names instead of their companies first. Whereas AI recommendation focuses on small business suggestions

Addressing Sev 3 No Change

Sev 3: H3: When the user clicks send message and it brings the user to a screen to draft the message: let's say the user decides to not send the message after all, shouldn't it bring the user back to the feed instead of the inbox?.

This is a limitation of Figma, but it will be fixed in the actual prototype (with expo-router)

AI Usage

Implemented Features

Introduction

Task 1 (send a message)

What's left

Wizard of Oz

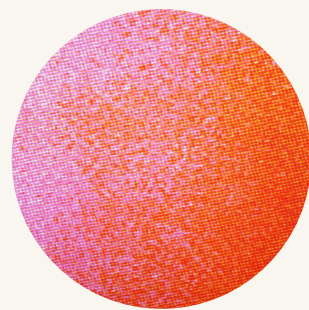

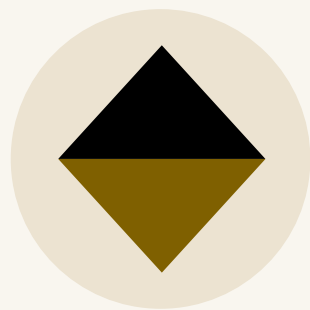

In expectation, this would be an app built upon by users (real posts, real interactions), but in practice, without other users, we have to “wizard of oz” users, posts, and messages

- 1.

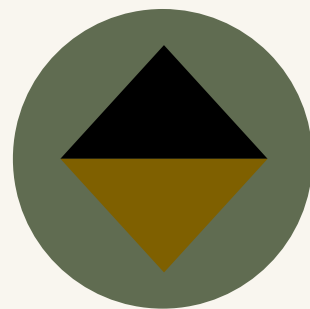

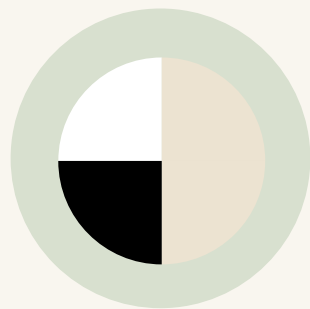

Hardcoded

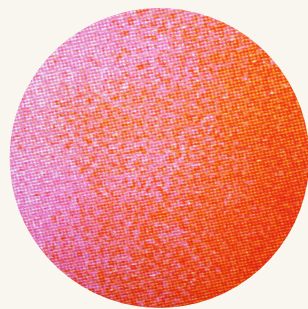

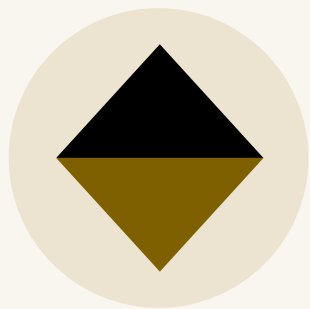

Issues

Plans

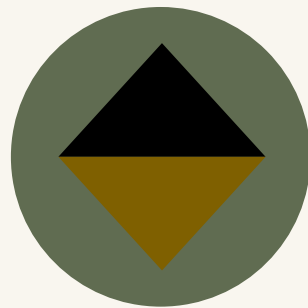

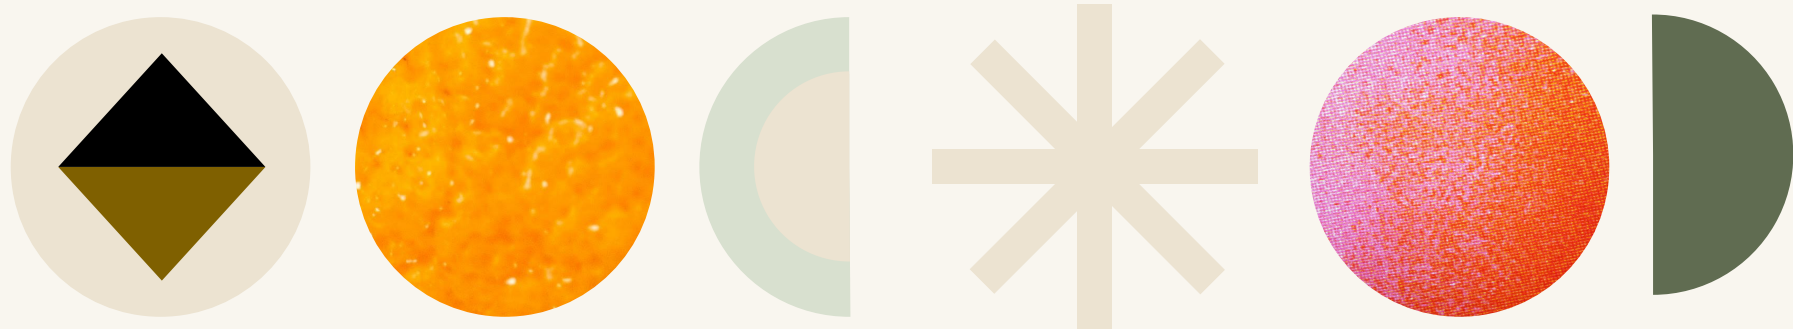

Demo Time

Appendix

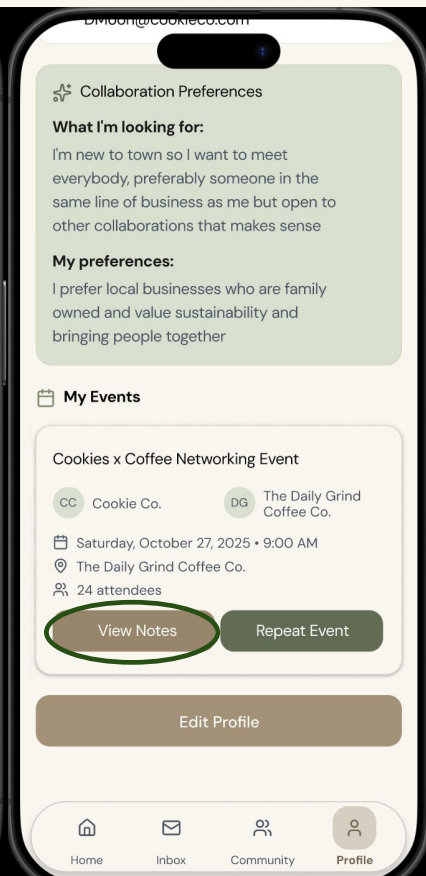

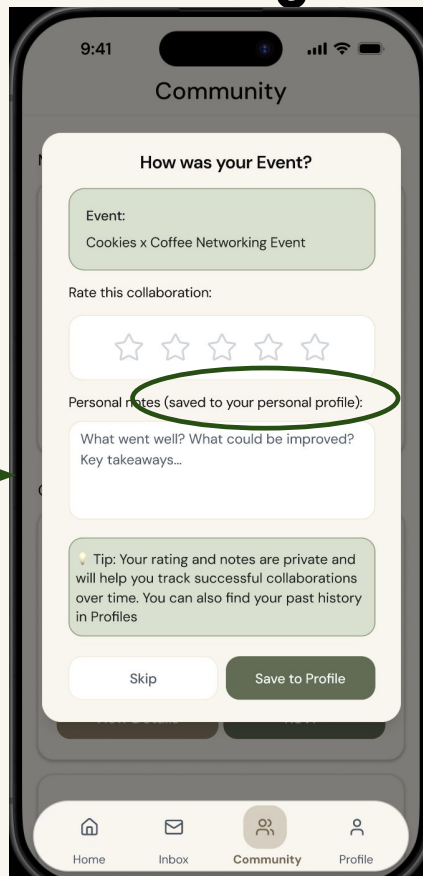

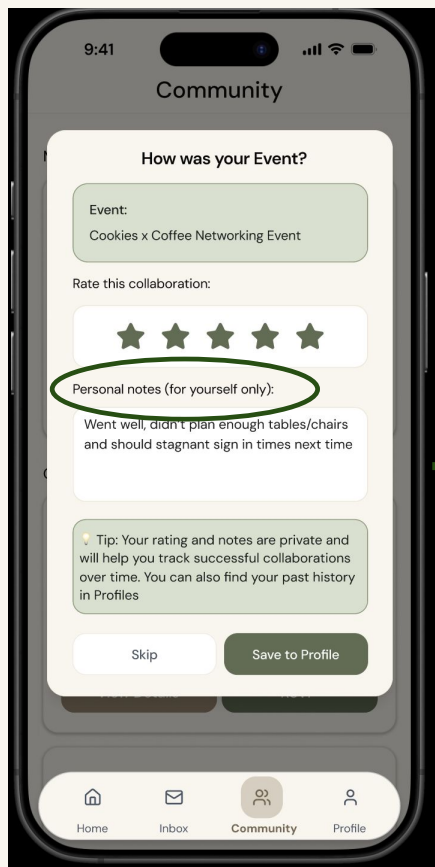

Minor Changes

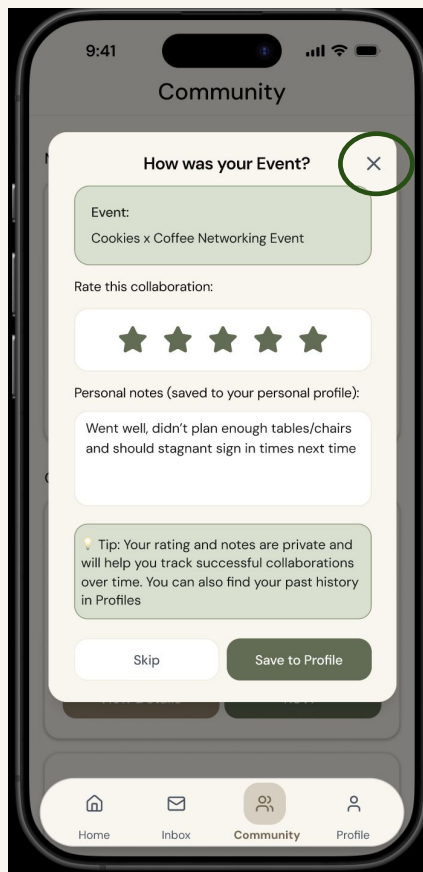

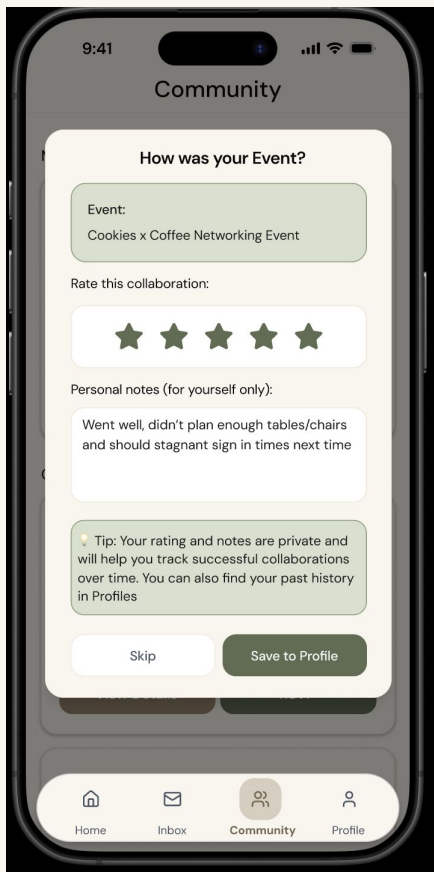

Sev 2: H6: Not entirely clear where the "Personal Notes (for yourself)" are being stored when rating the Finish

Efficiency ++

Change:
Made it explicit that notes are being saved to personal profile, and on profile the button has been changed to say "View Notes"

Sev 2: H3: When the user clicks "finished task" they don't have an option to exit the pop up if the user accidentally clicks on it

Change: Added "x" icon at the top to show that users can exit at anytime

Flexibility ++

Sev 1: H8: In onboarding, the progress bar at the top should be three equal length bars instead of one that is being filled with the green colour as the steps progress, as the user progresses with each step, one bar should be filled.

Before

Step 1 of 3

Step 2 of 3

Step 3 of 3

After

Step 1 of 3

Step 2 of 3

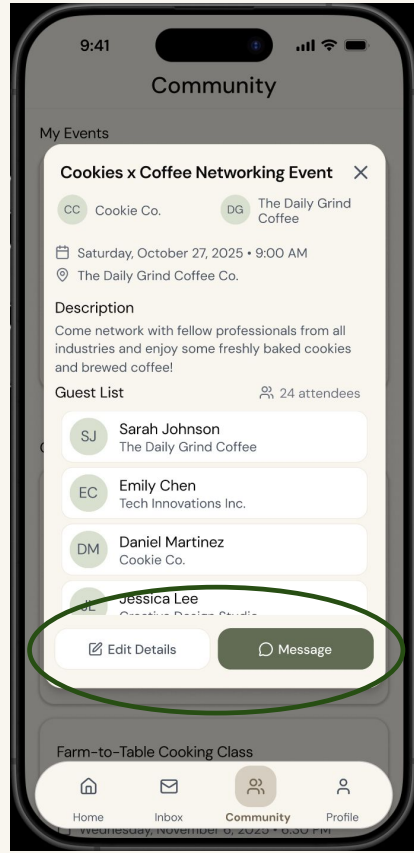

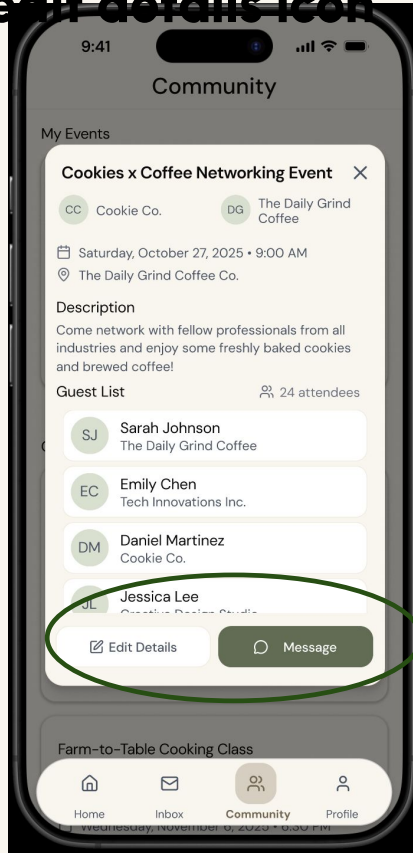

Step 3 of 3

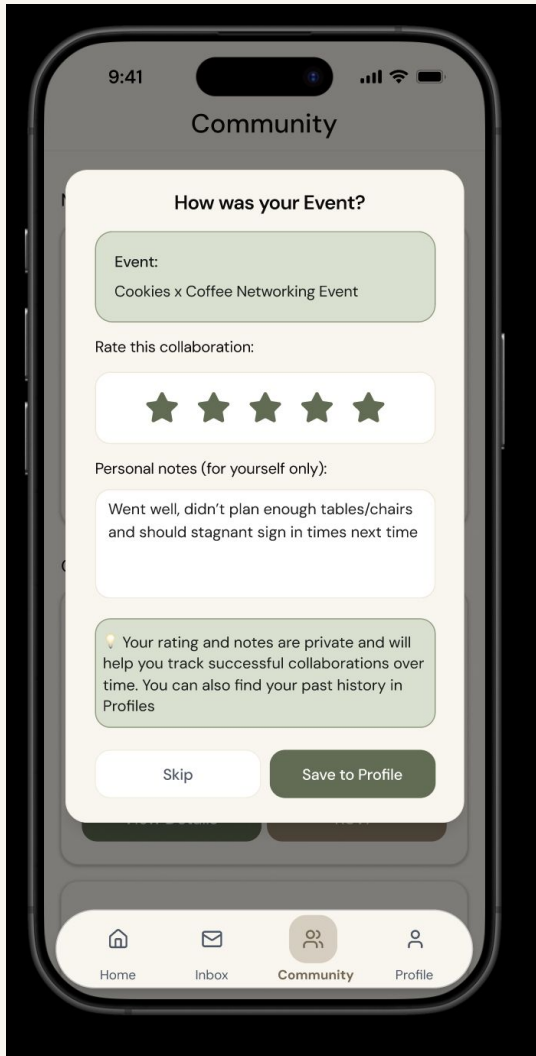

While we decided to not break it down into 3 different bars, we made sure that $\frac{1}{3}$, $\frac{2}{3}$, and $\frac{3}{3}$ are proportional to the actual width of the bar (step 2 of 3 really is $\frac{2}{3}$ of the bar)

Sev 1: H4: When the user finishes creating a stitch and when they view the event. The icon spacing between message and the icon message is not consistent with the spacing of the edit details and edit details icon

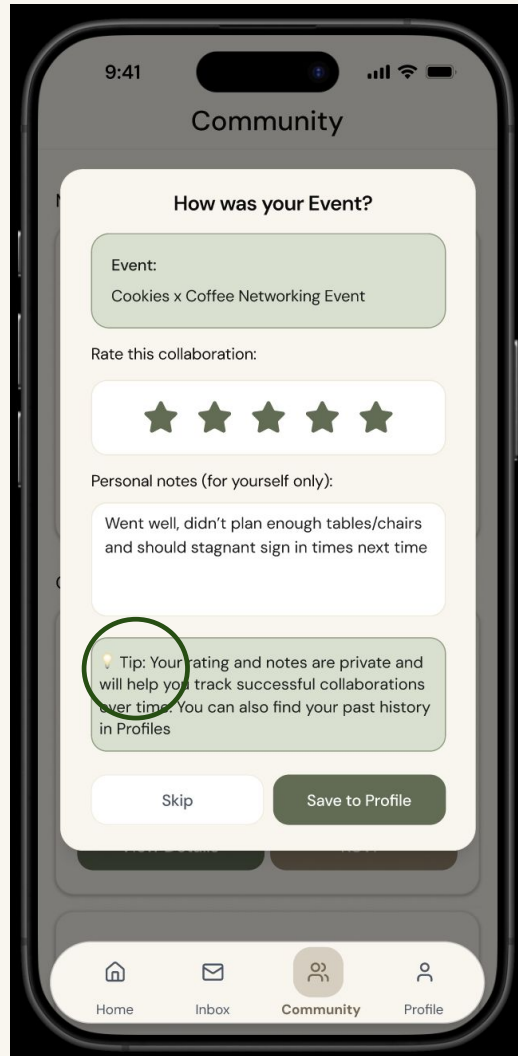

Fixed so the gap is consistent at 5 across all icons and texts on a button

Before

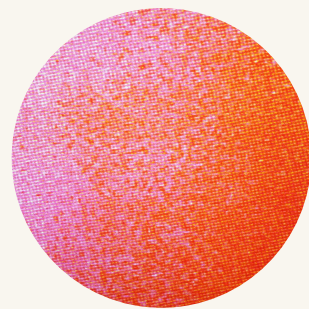

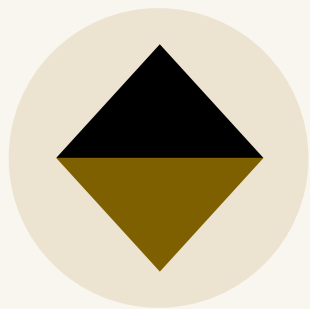

After

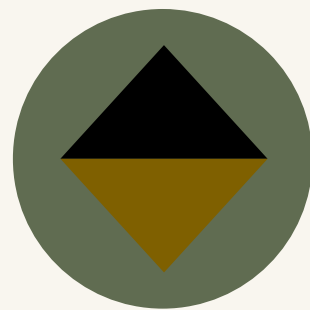

Sev 1: H4: When the user goes through the post "survey" for finishing an event, the tip box does not include the tip text after the light bulb icon

Added the "tip" text after the light bulb icon

No Change

Sev 2: H11: Text size is too small - your primary audience is small business owners.

According to [Apple Developer Guidelines](#), minimum size recommended is 11pt, and the smallest font size we have is 14pt, which exceeds the recommended minimum font. Most of our font size for important information is well above 14/

Platform	Default size	Minimum size
iOS, iPadOS	17 pt	11 pt

Sev 2: H11: No option to call/record voice memos for users who are not very text savvy.

While this is a good point, we believe that calling/recording memos could be a great next step after establishing relationships using our messaging feature → if the owners want to exchange numbers offline for future purposes. This is a great next step of development but it currently exceeds the scope of our development

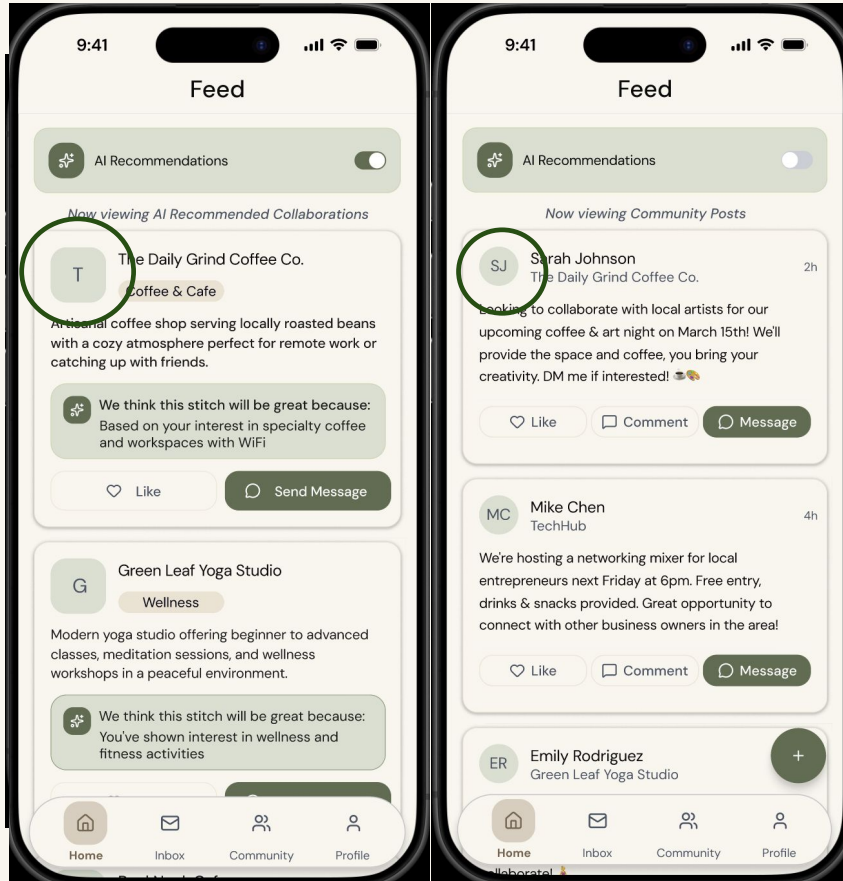

Sev 2: H7: The user has to go through with rating the event first before they can go to repeat it.

This is intention. We want the users to first rate the event and fill out the post event form before being able to take any other action (archive, repeat event). The rating is very important for the algorithm to recommend other potential collaborations, and for the users themselves to write personal notes about the event. If we didn't have this limitation, users won't be incentivized to fill out the post events form at all.

Sev 2: H6: After users view the confirmation ("Check it out in Communities"), the system doesn't automatically scroll or highlight the event when the Communities page opens.

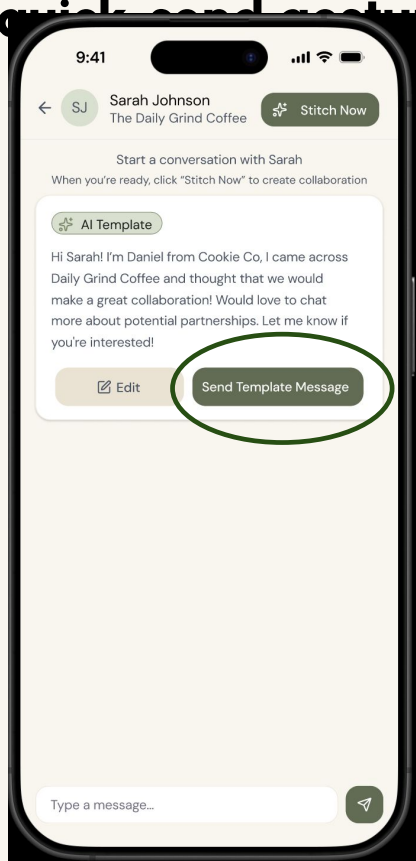

This is a limitation of Figma, it will be taken into account in the final prototype

Sev 2: H7: When the user toggle between AI and non-AI, the icon with the initial is changing in size and shape

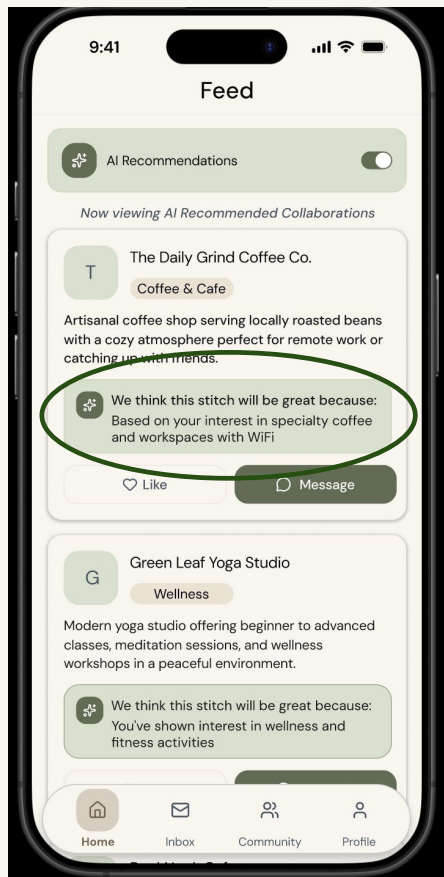

This is **intentional**. We want to distinguish between the community posts and the AI recommended collaborations. For community post, we want to highlight the business owner, so using their real name, using circle to represent profile picture. For AI recommendations, we want to highlight the business as a whole, so using a larger square to better distinguish the two.

Sev 2: H7: Experienced users who repeatedly send outreach messages must always scroll through the AI Template block and click Send Template Message; there's no keyboard shortcut or quick send gesture.

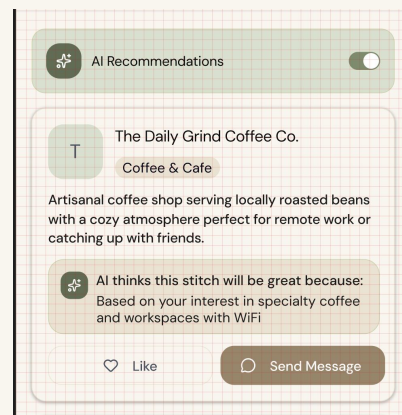

This is **intentional**. The "send template message" is the first thing people see (due to its large size, dark green color, and positioning in the middle of the screen). Experienced AND inexperienced users can simply press the button and send the message. Keyboard shortcut and quick send gestures can't simplify it more than that. In fact, learning a new quick send gesture actually increases the learning curve for using the app, and complicates it more than if one just simply pressed the button in the middle of the screen.

Sev 1: H8: Use of green highlight for the "AI thinks this.." draws focus away from the main content.

No Change:

1. Keeping it green keeps it consistent with the top "AI recommendations" green bar
2. We would argue that the "AI thinks this..." is actually the main content. Of course the main content are the small business cards, but to keep in line with our value of transparency, we want to make the AI reasoning very clear, even drawing attention to it.
3. The alternative was worse →

Sev 1: H9: The green info panel is at the bottom and intuitively users are likely to read it at the end after they have already filled in their details.

No change:

1. Alternative is worse (see right image)
2. According to lecture, if we want to highlight something, we can use color to draw someone's attention: we are putting tip box in green, so even if its at the bottom, our eyes will naturally gravitate there

Sev 1: H12: The App currently lacks other language options.

This is an inspirational idea that got our team thinking about the potential of fostering cross cultural collaborations. While this might be out of the scope for our med fi, we think this would be a great step to think about in the future.

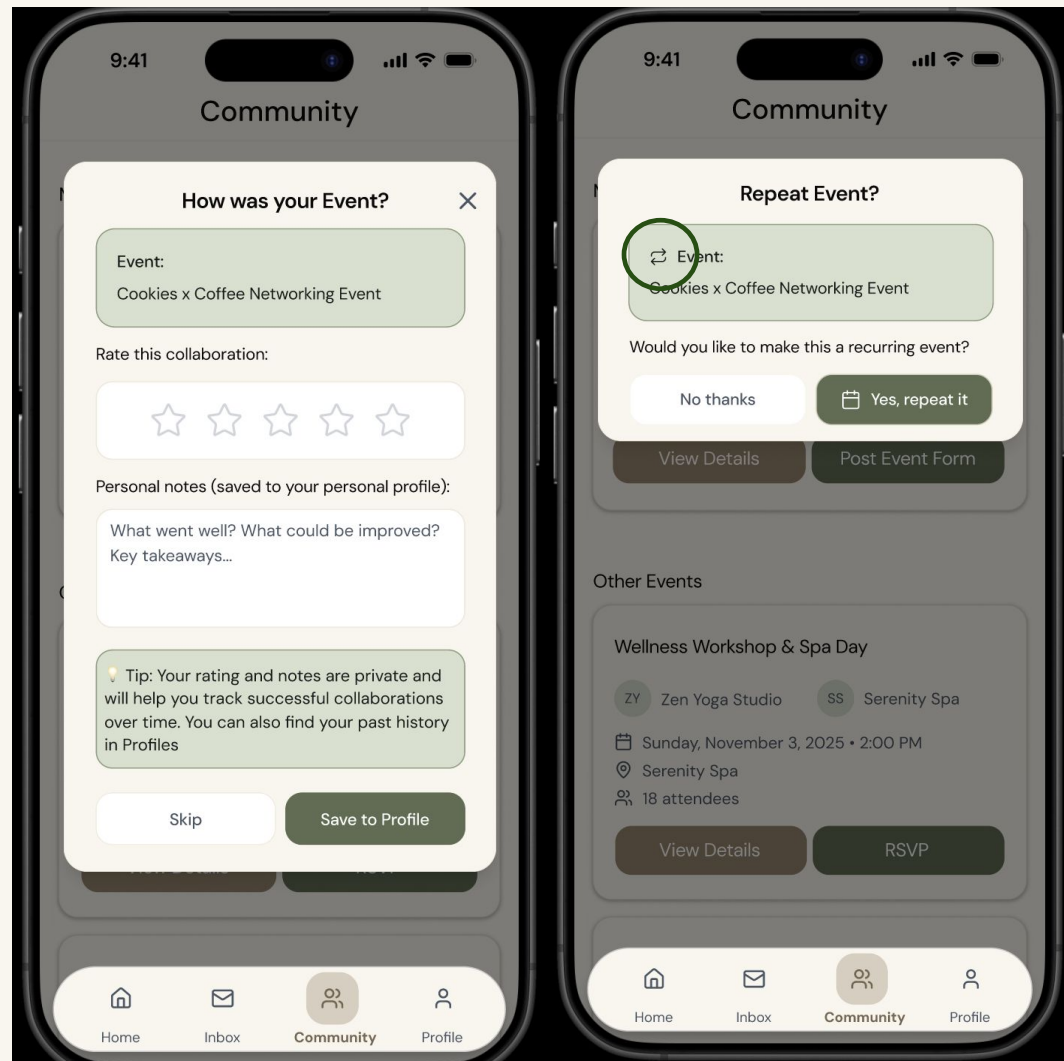

Sev 1: H7: The Stitch creation flow doesn't include an option to make the event recurring (I understand that after that you can make it recurring, might be beneficial to have it here as well).

This is intentional. Without first having done a collaboration, no one knows if they want to repeat an event (too many uncertainties), eg. this feature would not get used anyways if we implement it. Therefore, we will stick with only making the event repeatable AFTER one has finished the first collaboration.

Sev 1: H4: When it says "Event" it has a repeat icon in front of the Event, but users know they are repeating the event or not. For consistency sake, keep Event as "Event" as its functionality is to tell the user what event they are looking to repeat or not.

No Change:

The function of the two forms are completely different. One is for post event form, where it wouldn't make sense to have the repeat icon, but the other form is asking to repeat an event or not. It would make visual sense to add the icon for distinguishing reasons, and it communicates to the users in more way than one that we are talking about repeating an event

Sev 1: H11: he system doesn't provide any autocomplete or suggestion memory for event names previously used

Intentional: We argue that this actually affects flexibility (H7). The point of the events is to collaborate with multiple people, and having autocomplete limits that. If I had an event called "Coffee x Cookie networking event," that implies that I am collaborating with a coffee shop. If I next want to collaborate with a flower shop, the autocomplete "Coffee x Cookie" doesn't really make sense, and adds extra cognitive load for the user to get rid of it.

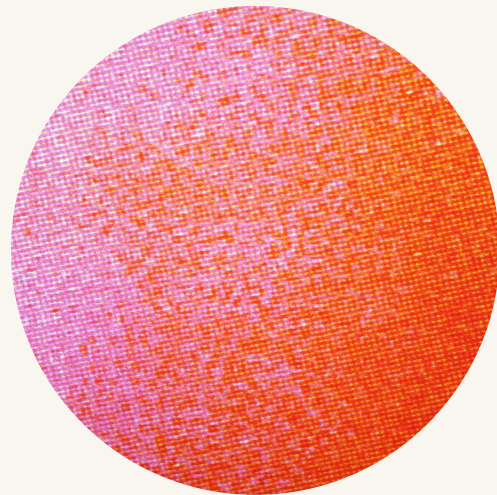

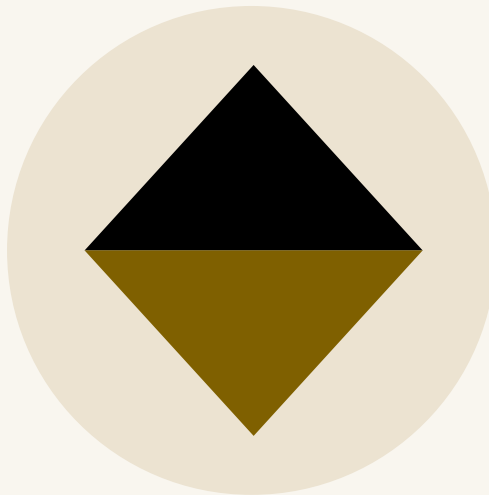

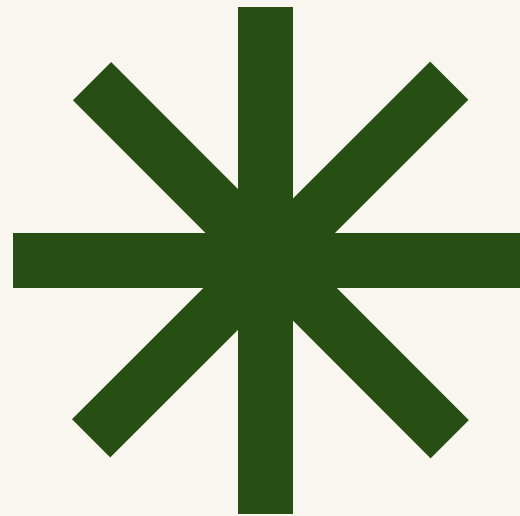

CONGRATULATIONS ALEXIS VIDAL!
